

Materials With Metallic Content - BrikStar VM

A BrikStar V is configured as a press unit with separate hydraulic system, electrical panel (including PLC controls) and flange for connecting a screw feeder and trough; but without hopper and agitator or hopper and walking floor. This press is the ideal solution for very specific requirements; otherwise it has an identical performance to a BrikStar CM. We would welcome the opportunity of discussing with you how a BrikStar VM could be integrated into your production process.
